

THE FIELD SHIELD

The world's first rapidly deployable, modular, ventilated ballistic barricade system designed to protect our nation's most critical assets inside the perimeter fence.

PORTABLE

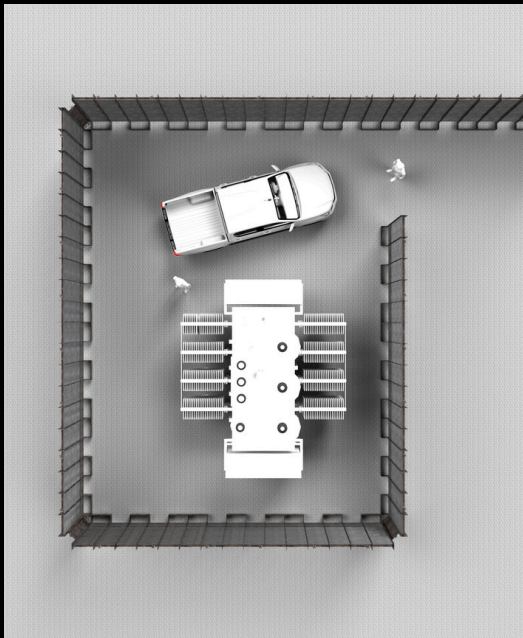

Flexible configuration and fully portable, allowing systems to be quickly redeployed to new sites as needed.

VENTILATED

Wave Guide Technology provides enhanced airflow while directing projectiles and fragments away from critical equipment.

SIMPLE

Simple installation, zero recommended maintenance and an expected 30+ year service life.

LIVE WELL PROTECTED

SIMPLE INSTALLATION, EFFORTLESS MAINTENANCE

Created by a seasoned team of ex Department of Defense contractors with expertise in survivability and ballistics.

Field Shield is a ballistic asset protection system designed to install inside the wire near critical hardware. Comprised of individual, pre-engineered segments, the system can be quickly configured to any site. Third-party tested to withstand up to 200 mph wind speeds, the ballast bases can be filled with concrete, sand, gravel, water or left empty.

The installation process is designed for minimal disruption and rapid deployment with simple site prep and no civil engineering. The system can be installed as close as 1 foot from critical devices and is deployed using fleet maintenance trucks.

The Field Shield System comes in a raw mill finish, with additional coating options available. Choose from Hot-Dipped Galvanized for heavy corrosion protection or a range of Powder Coat colors.

All ballistic testing is conducted in accordance with ARL procedures. Our U.S Military Grade armor meets additional standards including NIJ-Level III, CEN B6, and STANAG Compliance.
